

A-type

One-Stage Implant One-Piece

Material : Pure Titanium
Surface treatment : ABS

[γ -Sterilized]

The A-type implant is the one-piece type of implant.

The abutment part employs a single-surface cutting. The interface part between the fixture body and the abutment incorporates a micro-thread design to distribute the stress within the cortical bone and prevent bone resorption. The A-type implant is the implant which has the least invasiveness of surgical procedures for patients. Indications include cases with single tooth restorations and intermediate missing teeth.

Implant

$\phi 3.0$

Product name	Endosteal diameter	Endosteal depth	Cuff height	Abutment height
A3008-02-05S	$\phi 3.0$	8.0mm	2.0mm	5.0mm
